Project Details & Documentation

Please note that the comprehensive details regarding the database storage engine, experimental setups, and performance metrics are not duplicated in this document. All necessary and required information can be found in the following core resources:

- **Analysis & Explanation Videos:** Detailed breakdowns of the architecture, algorithmic choices, and visual proofs of the system's execution.
- **record.txt:** The complete log of all reproducible bash commands, query generations, and exact statistical results for all three experiments.
- **README.md:** The overarching guide for compilation, configuration (`config.json`), and execution of the program.
